To whom it may concern:

In November 2003, we obtained the services of Professional Technical Systems, Inc. & Energy Solutions LLC at Tampa Bay Skating Academy. We believed this company could provide services that would lower our energy costs and protect our equipment. Being in Florida, the lightning capitol of the world, this was important to us. Ben Croxton and his team developed a multi-product approach to treat our facility. We have two ice rinks serviced by two 125 hp compressors. The compressors and our four dehumidifiers were treated with a high-tech oil additive, called Frigi-Tech. Motor controllers were also added to our dehumidifiers. In addition our four electric hot water heaters, each 30 kilowatts, were replaced by new state-of-the-art tank-less propane on demand hot water units. New transient voltage surge suppressors were installed on every electrical panel in the entire complex.

Since the equipment has been installed we have lowered our kilowatt consumption by a large amount. We have not had an electric spike in our system since the surge suppressors have been installed. The compressors are running cooler and noticeably quieter. Up until this point we had numerous service calls to our refrigeration company. After the additive was added we have not had any service calls! In fact our refrigeration company has called us to see why we have not called them for any service. I would highly recommend using Energy Solutions & Professional Technical Systems, Inc.

Sincerely,

A handwritten signature in blue ink that reads 'Dennis McMahon'.
